

ANTI-INFLAMMATORY

CLINICAL APPLICATIONS

- *Anti-inflammatory activity.*
- *Bone-joint inflammatory processes.*
- *Antiviral activity.*
- *Post-surgical inflammatory processes.*
- *Strengthening of the immune defense.*
- *Adjuvant action in prostatic hyperplasia.*

What is Bioenzym?

Bioenzym is a multi-targeted enzymatic therapy developed to support the body's natural anti-inflammatory processes, digestive metabolism, and immune regulation. It combines biologically active enzymes, antioxidant compounds, biopeptides, and nutrient cofactors that work synergistically to break down inflammatory proteins, restore tissue circulation, and reduce oxidative stress—without affecting healthy organ systems

Bioenzym is particularly effective in acute and chronic inflammatory processes, including rheumatoid arthritis, osteoarthritis, soft tissue inflammation, and post-surgical recovery. It also plays a vital role in digestive health, liver support, and systemic detoxification, especially in patients with chronic gastrointestinal symptoms, toxin accumulation, or impaired enzyme activity.

It is an ideal therapy for patients who require steroid-free inflammation management, immune defense optimization, or adjuvant support for connective tissue, prostate, or viral stress.

Benefits

- Alleviates inflammatory joint pain, swelling, and stiffness
- Enhances circulation and tissue oxygenation at inflammation sites
- Improves digestive balance and nutrient absorption

Highlights

- Reduces chronic and acute inflammation through proteolytic enzyme activity
- Aids in breaking down fibrin obstructions and inflammatory debris in tissues
- Supports connective tissue repair and post-surgical recovery
- Enhances gastrointestinal and liver function
- Promotes immune defense and systemic detoxification
- 100% natural and non-toxic; safe for long term use

Key Bioactive Compounds

Pancreatic and intestinal enzymes, antioxidant enzymes, biopeptides, lycopene, bile salts, glutamine, choline, inositol, DMAE, and enzyme cofactors.

Administration

Orally, consume before taking food to improve absorption, preferably with water in the morning.

Does Not Contain

Gluten, corn, yeast, artificial colors or flavors.

Composition:

Boxes of 30 tablets of 650 mg. / Boxes of 60 tablets of 650 mg.

Each 650 mg tablet contains:

Opoththerapy Extracts: Embryo, Thymus Gland.
Peptide Extracts: Embryo, Thymus Gland.

Enzyme Complexes: Glutathione Transferase, Glutathione Peroxidase, Superoxide Dismutase, Glutathione Reductase, Adenosin Trifosfato(ATP).

Other actives: Lycopene, Pancreatin 7NF, Pure Papain, Bromelain 2500 GDU. Trypsin 2, 160FIP-Uds Sus Scrofa, Chymotrypsin, Rutoside, Sophora Japonica., Calcium Phosphate, Gamma-Tocopherol, Cholecalciferol, Ascorbic Acid, Calcium, Zinc, Selenium, Genistein.

Other Ingredients: Stabilizers and Excipients.

Result Observational Studies

Bioenzym® - Anti-inflammatory Therapy

Results of observational studies for the indication of the treatment of the following medical parameters.

Preventive therapeutic action in patients with some genetic predisposition.

The therapeutic action as a primary treatment in patients with degenerative diseases that for several years were treated with conventional medicine and the expected results are not observed.

The therapeutic action as an adjuvant or reinforcement in the chaos of various pathologies combined with

Postoperative Care

Physicians report above average results in the administration of BIOENZYM for postoperative care.

Pain-free

Osteoporosis patients report decreased pain after treatment.

Chronic disease

Improved conditions are reported in patients with chronic degenerative diseases.

degenerative

Joint disease

Improvements and relief of rheumatoid arthritis symptoms are reported.

Joint function

Patients report improved elasticity and improved joint function.

Anti-inflammatory action

Patients report an improvement in their inflammatory processes noticing an improvement.
