

# Cellorgane<sup>®</sup> 2

## DIGESTIVE THERAPY

### CLINICAL APPLICATIONS

- *Hepatic Insufficiency.*
- *Hepatic Cirrhosis.*
- *Hepatitis C.*
- *Hepatic Toxicity.*
- *Improves and normalizes liver functions.*
- *Regulates and normalizes plasma proteins.*

### What is Cellorgane 2?

Cellorgane 2 is formulated to restore cellular health and functional balance within the gastrointestinal and hepatobiliary systems. It supports mucosal integrity, digestive enzyme regulation, and detoxification through the liver. Clinically, it may benefit patients experiencing digestive disorders such as chronic constipation, gastritis, bloating, intestinal inflammation, and malabsorption.

This product is often integrated into protocols addressing gut-liver axis dysfunction and metabolic endotoxemia—factors known to contribute to systemic degeneration. It contains biologically active peptides that modulate gut immune responses and antioxidant enzymes that protect against cellular damage.

### Key Bioactive Compounds

- Glutathione Peroxidase, Glutathione Reductase, Glutathione Transferase, Superoxide Dismutase, and peptide extracts from digestive and liver tissues.

### Benefits

- Improves digestive and hepatic function
- Maintains gastrointestinal equilibrium
- Reduces symptoms of gastritis and constipation
- Enhances nutrient absorption
- Supports systemic detoxification through the liver

### Highlights

- Contains homeotherapeutic cellular extracts from liver, embryonic mesoderm, thymus, and placenta
- Includes antioxidant enzymes that reduce oxidative stress and support detox pathways

### Administration

Orally, consume before taking food to improve absorption, preferably with water in the morning.

### Does Not Contain

Gluten, corn, yeast, artificial colors or flavors.

### Composition:

**Boxes of 30 tablets of 650 mg. / Boxes of 60 tablets of 650 mg.**

### Each 650 mg tablet contains:

Opotherapeutic cell extracts: Liver, Pancreas, Stomach, Intestines, Thymus Gland.

**Peptide extracts of:** Liver, Pancreas, Stomach, Intestines, Thymus Gland.

**Enzyme complexes:** Superoxide Dismutase, Glutathione Peroxidase, Glutathione Reductase, Glutathione Transferase, Adenosine Triphosphate (ATP)

**Other Ingredients:** stabilizers and excipients.

### - Opothherapeutic cell extracts: Liver

## Result Observational Studies

### Cellorgane® 2 - Digestive Therapy

Results of observational studies for the indication of the treatment of the following medical parameters.

Preventive therapeutic action in patients with some genetic predisposition.

The therapeutic action as a primary treatment in patients with degenerative diseases that for several years were treated with conventional medicine and the expected results are not observed.

The therapeutic action as an adjuvant or reinforcement in the chaos of various pathologies combined with

#### Adjuvant Treatment

Physicians surveyed report that Cellorgane is instrumental in aiding the treatment and cure of disease.

#### Physical-mental energy levels

Almost all of the patients treated noticeably increased their physical and mental energy levels

#### Medical expertise

Medical professionals feel confident and supported when using a CELLORGANE treatment.

#### Digestive stimulation

Medical professionals detect in patients an increase in bile production and a decrease in toxic substances.

#### Hepatic functions

Improvement and normalization of liver functions were manifested in a large number of patients.

#### Pancreatic improvement

A great stimulation in insulin production plus a strengthening of pancreatic functions is detected in patients.
