

Cellorgane[®] 3

CIRCULATORY THERAPY

What is Cellorgane 3?

Cellorgane 3 promotes vascular and cardiac health by revitalizing tissues of the circulatory and respiratory systems. It supports the integrity of blood vessels, enhances cardiac output, and helps restore endothelial function. Clinically, it may benefit individuals with hypertension, heart failure, atherosclerosis, varicose veins, or other vascular insufficiencies.

The formula contains biologically active peptides and antioxidant compounds that support oxygen transport, redox balance, and protection against oxidative damage in heart and lung tissues.

Key Bioactive Compounds

Heart- and lung-targeted biopeptides, and antioxidant enzyme complexes.

Benefits

- Revitalizes heart and vascular tissues
- Improves circulatory function and arterial health
- Supports blood pressure regulation
- Reduces symptoms related to vascular insufficiency
- Enhances systemic oxygenation and vascular health
- Acts at a cellular level to restore circulatory tone

CLINICAL APPLICATIONS

- *Adjuvant in diseases associated with the circulatory system.*
- *Aneurysm.*
- *Ischemia.*
- *Angina pectoris.*
- *Arrhythmia / dysrhythmia.*

Highlights

- Contains homeotherapeutic cellular extracts from heart, arteries, veins, lung and thymus

Administration

Orally, consume before taking food to improve absorption, preferably with water in the morning.

Does Not Contain

Gluten, corn, yeast, artificial colors or flavors.

Composition:

Container of 30 tablets of 650 mg. / Container of 60 tablets of 650 mg.

Each 650 mg tablet contains:

Opotheapeutic cell extracts: Heart, Arteries, Veins, Lung, Thymus Gland.

Peptide extracts of: Heart, Arteries, Veins, Lung, Thymus Gland.

Enzyme complexes: Superoxide Dismutase, Glutathione Peroxidase, Glutathione Reductase, Glutathione Transferase, Adenosine Triphosphate (ATP)

Other Ingredients: stabilizers and excipients.

-Opotheapeutic cell extracts: Heart

Result Observational Studies

Cellorgane® 3 - Circulatory Therapy

Results of observational studies for the indication of the treatment of the following medical parameters.

Preventive therapeutic action in patients with some genetic predisposition.

The therapeutic action as a primary treatment in patients with degenerative diseases that for several years were treated with conventional medicine and the expected results are not observed.

The therapeutic action as an adjuvant or reinforcement in the chaos of various pathologies combined with

Adjuvant Treatment

Physicians surveyed report that Cellorgane is instrumental in aiding the treatment and cure of disease.

Physical-mental levels

Almost all of the patients treated noticeably increased their physical and mental energy levels

energy

Medical expertise

Medical professionals feel confident and supported when using a CELLORGANE treatment.

Immunological Response

After a complete treatment with Cellorgane 3, an immune response is obtained in most of the treated cases

Respiratory Diseases

Sinusitis, asthma, emphysema, bronchitis, etc. experience improvements in a large part of the treated patients.

Circulatory improvement

As an adjuvant in diseases associated with the circulatory system, many improvements are reported.
