

Cellorgane[®] 4

OSTEOARTICULAR THERAPY

CLINICAL APPLICATIONS

- Arthritis.
- Osteoarthritis Osteoporosis.
- Osteopenia
- Anemia.
- Immunosuppression.
- Acute and chronic infections.

What is Cellorgane 4?

Formulated to support the osteoarticular system, Cellorgane 4 enhances joint mobility, strengthens connective tissue, and promotes the regeneration of cartilage and bone.

This product is especially beneficial for patients dealing with joint stiffness, osteoporosis, arthritis, or chronic musculoskeletal stress. Its biologically active peptides stimulate chondrocyte function, while the enzyme Rhemacell contributes to anti-inflammatory and tissue-rebuilding pathways.

Key Bioactive Compounds

- Rhemacell, bone- and cartilage-derived biopeptides, and connective tissue modulators

Benefits

- Supports cellular revitalization of chondrocytes
- Improves osteoarticular function Reduces risk of osteoporosis and degeneration
- Regenerates cartilage and fortifies bone structure
- Enhances joint mobility and function

Highlights

- Includes extracts from bone, cartilage, vertebrae, bone marrow, embryonic mesoderm, thymus, and placenta
- Contains Rhemacell, a key enzyme in cartilage and bone regeneration

Administration

Orally, consume before taking food to improve absorption, preferably with water in the morning.

Composition:

Container of 30 tablets of 650 mg. / Container of 60 tablets of 650 mg.

Each 650 mg tablet contains:

Opothérapeutic cell extracts: Bones, Vertebrae, Bone Marrow, Thymus Gland.

Peptide extracts of: Bones, Vertebrae, Bone Marrow, Thymus Gland.

Enzyme complexes: Superoxide Dismutase, Glutathione Peroxidase, Glutathione Reductase, Glutathione Transferase, Adenosine Triphosphate (ATP)

Other Ingredients: stabilizers and excipients.

- Opothherapeutic cell extracts: Bones

Result Observational Studies

Cellorgane® 4 - Ostearticular Therapy

Results of observational studies for the indication of the treatment of the following medical parameters.

Preventive therapeutic action in patients with some genetic predisposition.

The therapeutic action as a primary treatment in patients with degenerative diseases that for several years were treated with conventional medicine and the expected results are not observed.

The therapeutic action as an adjuvant or reinforcement in the chaos of various pathologies combined with

Adjuvant Treatment

Physicians surveyed report that Cellorgane is instrumental in aiding the treatment and cure of disease.

Physical-mental energy levels

Almost all of the patients treated noticeably increased their physical and mental energy levels

Medical expertise

Medical professionals feel confident and supported when using a CELLORGANE treatment.

Immunosuppressive response

After a complete treatment with C4, an immunosuppressive response is obtained in a large proportion of the treated cases.

Degenerative joint pain

Patients report an increase in the quality of life as arthritis and osteoarthritis symptoms are significantly reduced.

Effectiveness of treatment

Physicians report a significant improvement in older patients in resistance to bone fractures.
