

Cellorgane[®] 5

RENAL THERAPY

What is Cellorgane 5?

Cellorgane 5 is formulated to support renal health, enhance detoxification, and protect the kidneys from age-related degeneration. Its biopeptide-based composition promotes the self-regeneration of nephrological tissue and helps normalize kidney filtration and plasma volume regulation.

This formula also supports electrolyte balance, blood pressure regulation, and helps prevent or dissolve kidney stones. It may be used in protocols addressing anemia, diabetes mellitus, and chronic renal stress.

Key Bioactive Compounds

- Renal-derived peptides, Biolastin, and antioxidant enzyme complexes

Benefits

- Supports renal filtration and detoxification
Provides protection against renal degeneration
- Strengthens nephrological tissue and kidney function
- Helps regulate plasma volume and blood pressure
- Assists in preventing and managing kidney stone formation

CLINICAL APPLICATIONS

- Renal insufficiency.
- Anemia
- Diabetes Mellitus.
- Strengthens all kidney functions.
- Increases and normalizes blood detoxification.
- Regulates blood pressure and plasma volume.

Highlights

- Contains homeotherapeutic cellular extracts targeting kidney function
- Includes biolastin for antioxidant and anti-aging effects

Administration

Orally, consume before taking food to improve absorption, preferably with water in the morning.

Composition:

Blister with 30 tablets of 650 mg. / Container of 60 tablets of 650 mg.

Each 650 mg tablet contains:

Opotheapeutic cell extracts: Kidney, Thymus Gland, Placenta.

Peptide extracts from: Kidney, Thymus Gland, Placenta.

Enzyme complexes: Superoxide Dismutase, Glutathione Peroxidase, Glutathione Reductase, Glutathione Transferase, Adenosine Triphosphate (ATP)

Other Ingredients: stabilizers and excipients.

Result Observational Studies

Cellorgane® 5 - Renal Therapy

Results of observational studies for the indication of the treatment of the following medical parameters.

Preventive therapeutic action in patients with some genetic predisposition.

The therapeutic action as a primary treatment in patients with degenerative diseases that for several years were treated with conventional medicine and the expected results are not observed.

The therapeutic action as an adjuvant or reinforcement in the chaos of various pathologies combined with

Adjuvant Treatment

Physicians surveyed report that Cellorgane is instrumental in aiding the treatment and cure of disease.

Physical-mental energy levels

Almost all of the patients treated noticeably increased their physical and mental energy levels

Medical expertise

Medical professionals feel confident and supported when using a CELLORGANE treatment.

Blood pressure levels

Cellorgane 5 helped 89% of treated patients regulate their blood pressure levels.

Blood detoxification

After treatment, blood tests show more balanced parameter results in most cases

Kidney stones

Nearly all patients under treatment have not had or reproduced kidney stones.
